Comments: Helicopter traffic in the Sedona area is out of control and having a major negative impact on US Forest Service lands in The Coconino National Forest. The Draft EIS does not adequately address these negative impacts to the visitor experience, solitude, wilderness character, and wildlife fro helicopters. These tourist vehicles regularly fly below the Mogollon Rim and barely above the tree tops. One of the worst areas is the Marg's Draw area that is designated Wilderness in the CCNF. There is little solitude in this area and the visitor experience is ruined by low flying helicopters. The USFS should address this issue in their impact analysis.
