Comments: mid swan proposed action

I have just started reading through the information on the forest service website concerning the mid swan proposed action, and was glad to see that you are extending the deadline for comments. I will need more time to understand the proposals, and was concerned when I saw the limited amount of time allowed for comment. I was unfortunately unable to attend the meeting in Condon regarding this issue because of a prior commitment.

My first concern is the plan for new roads. I live in the middle of this mid swan area and know that the number of existing roads is a problem, and more roads will cause even more sediment to flow into creeks and rivers. And more roads cause problems for the wildlife. If I am reading your maps correctly, some of these proposed roads are in high areas up Goat Creek (Napa) and up to the Mission Wilderness boundary in areas around Woodward, Fatty Creek and south of there from the Fatty to Piper cut across. No on those! So please add my name to comments that say no to more roads in the Swan.

I tried to get more information from your site but the document that came up was un-readable. Perhaps it was being up-dated when I tried to look at it, so I will try again another time.

Thank you. I would like follow up information from you as it becomes available.

Sincerely,

Sheri Burden
