Comments: I object to the closing of more access to our national forest. with all the growth experienced and future predicted, we need more access not less to lessen the impact on current access. If we continue to restrict public access we will do more harm to the resource not less as a whole. Add the less access for fire and resource management activities could have a long term effect.

Also past lack of landscape prescribed fire and resulting large uncontrolled fire has added to habitat degradation.

If continued added restriction continues only the rich who can afford outfitters and guides will be able to enjoy their National Forests.
