Title:

Comments: It isn't a forest; this is planet Earth, the Earth that alone, generates and flows all of mankind's required life-lines for life itself. A mere handful of these ecological life-supporting services, provided only by wild and natural planet Earth are, oxygen releasing; the balancing of the gaseous composition of the atmosphere; the vital water cycle, vital for the cooling of the climate; and the vital nitrogen cycle that flows between plants and animals and provides 80 percent of the air mankind requires for life itself.

The appearance of plants and trees on the land's surface was the evolutionary event that provided life as we know it: "Humans are transforming Earth's natural landscapes so dramatically, that as many as one million plant and animal species are now at risk of extinction, posing a dire threat to ecosystems [wild, natural Earth]...that people all over the world depend upon for their survival..."

And, Einstein quoted, if all pollinators were to fall extinct, mankind would only have four more years of life. No pollinators, no trees, no plants and no food.

"In Wildness is the salvation of the Earth and the preservation of all life, long known among wolves and planet Earth but seldom perceived by man." The father of Ecology
