Comments: Please list wild bison as a species of conservation concern. It is not sufficient that there will always be migrants to visit the Forest seasonally, so that many, if not most, of them can be killed. That is the only purpose that bison habitat on the CGNF serves; and it occurs on a miniscule portion of the native bison habitat on the Forest. There are no bison, year-round on the Gallatin Forest; none ever on the Custer or on the Grasslands. Is this not "of concern"?
