Title:

Comments: As a wilderness user who supports Alternative D of the RDFP, I cannot agree with certain elements of the general Plan which as proposed undercuts and compromises the premises of wilderness status in notable respects, many of which are interrelated.

. The Plan should conform to clear evidence which indicates group size (both livestock and human) should be minimal.

. Fish stocking in natively fishless waters impermissibly alters natural conditions.

. Fecal contamination from both human and pack animal sources must be considered and minimized.

. No trail construction or rebuilding should occur in portions of the Absoroka-Beartooth and Lee Metcalf Wildernesses.

Thank you for your attention to my comments.
