Comments: As a gateway to Yellowstone National Park, the Absaroka-Beartooth Wilderness is home to Montana's tallest peak, the steep, rocky mass known as Granite Peak, which tops out at 12,799 feet. The 155,000-acre Hyalite Porcupine Buffalo Horn Wilderness Study Area (HPBH WSA) in the northern Gallatin Range adjacent to Yellowstone National Park is one of the crown jewels of the Northern Rockies and a stronghold for threatened wildlife. Meanwhile, the Lee Metcalf Wilderness is distributed across the Madison Range in southwest Montana. Elsewhere on the Custer Gallatin National Forest, remote buttes and bluffs stretch across southeastern Montana all the way to northwestern South Dakota.

As part of the Forest Plan revision process, the Gallatin Range-stretching from Bozeman to Yellowstone National Park-including the HPBH WSA, is particularly at risk of being sacrificed as a motorized and mechanized recreational playground for the exploding populations of Big Sky and Bozeman.

Wilderness recommendations in Alternative D of the draft forest plan, with the suggested improvements outlined below, would offer the best protection for the Gallatin Range and other critical wildlife habitat across the Custer Gallatin National Forest.

Alternative D creates 39 Recommended Wilderness areas totaling over 711,000 acres, including the Gallatin Range, Lionhead, Crazy Mountains, Bridger Range, Cowboys Heaven, Deer Creeks, Line Creek Plateau, Emigrant Peak, West Fork Rock Creek, Red Lodge Creek, Pryor Mountains, and Tongue River Breaks.
