Title:

Comments: The Trump Administration has opened US public lands to the exploitation for Big Oil, Fracking for natural gas, and mountain removal for coal. This is simply not acceptable. The technology exists to power the world in a manner that is more economically feasible than fossil fuels. Solar, wind, geothermal, and alcohol does not destroy the environment & poison the water, air, streams, lakes, and oceans. It is not logical to continue this insane assault on our health and our environment.
