Title:

Comments: I have been riding in the Gal national forest since 1975 including the crest on that year I have also hunted in the area mainly porcupine Taylor Forks Sage Creek on foot I have seen the difference personally with wildlife on a motorcycle they are not scared they hear a motor a no they're not being hunted when someone's walking they are very scared it is not true that motorcycles motorized recreation scare wildlife I have also seen in 40 years overriding the area very little resource damage I see more damage from horses and I do from motorcycles think it is very selfish to exclude motorized recreation I see the reason as people wanted their way are not willing to share I have been to many meetings over the past 30 years every time motorize recreation loses more trails there are more and more people wanting to recreate with motorized it will result in damage if it gets smaller and smaller the areas that can be used I am speaking from 40 years i've experience many people commenting don't have any I love the mountains I love to hike bicycle and use motorize recreation please consider call User groups
