Title:

Comments: The groups of humans and stock animals that the plan proposes are too high and would cause damage to the wilderness at these sizes - they must be decreased in size to 8 stock and 12 people maximum. The plan should not allow motorized vehicles and mechanized uses in the recommended Wilderness Areas as these are not consistent with the preservation of wilderness.

The trailers areas need to remain trails and there should not be any trail construction in these areas as it will adversely detract from the ability of the areas to sustain wildlife.

Previously available grazing areas should be closed so that they can become wilderness once again.
