Comments: Alternative A (no action) is the plan I would like to see implemented. From the prospective of a summer and winter motorized user, I don't believe any additional restrictions are necessary. I notice one obvious constant during all my travels throughout the forest. The population of all types of users is growing. With that growth the forest need good stewards. The best caretakers of the lands/trails in my experience have always been in the motorized community. We are the people who carry saws and take the time to clear the trails. We are the people who stop and help others in need. We are the people who pick up any trash we see along our travels. We are the people who organize volunteer trail clearing outings. Please take that into consideration as you implement any modifications to our forest.

Thank you
