Comments: I am a very strong supporter of Alternative D. I believe that the remaining wilderness must be left free of our human footprint, which in our era means loud and disruptive off road vehicles, and roads cutting through the territory of endangered species. Our forests will continue to suffer the effects of climate change, including longer fires seasons and prolonger higher temperatures. It is our responsibility as stewards of this forest to mitigate all negative impacts to the extent that we are able. The effects fo climate change will not be reversed in the near future. But we can keep human impacts at a very bare minimum. Please, lets have Alternative D. Our forest and all the life it contains are depending on that decision.
