Title:

Comments: Yellowstone country and its iconic species are under siege. To not take action to ensure greater protection of our last truly wild ecosystems and their 4-legged, winged and finned inhabitants; to not enhance the possibility of connectivity between Yellowstone grizzlies and those in the NCDE is an abdication of responsibility and sensibility.

As the author of five novels set in Yellowstone and Glacier National Park, I regularly receive messages from people all over this country and the world expressing their dismay and passionate pleas that we do everything in our power to protect our incredible wildlife and wilderness. Alternative D gives you the opportunity to do just that. I urge you to adopt Alternative D.
