Re:Custer Gallatin National Forest Plan Revision

Please accept for the record my comments on the above plan as a resident of the Custer Gallatin National Forest area and as a world citizen:

Every square inch of natural, undisturbed land that is changed for any type of activity is lost forever.

Our current inventory of undisturbed land is increasingly challenged due to the dramatic effects of changes in our climate, with species of both fauna and flora being threatened or already lost forever.

While we, humans, have any control over our actions that can affect our natural, undisturbed land, we should preserve and protect those lands.

I therefore support Alternative D, with additional provisions that confirm the status of the current ecosystems within the forest, set policies that protect those systems, and monitor and eliminate the effect of any action that affects them.

Sincerely,

Elizabeth Scanlin
