Comments: Commenting in support of Alternative D. Found out about this only today, but took the time to review quite a bit of the background materials produced to date before arriving at the conclusion that Alternative D seems likely to produce the best possible outcome for the broadest range of issues that could be impacted by any of the Alternatives being considered. Appreciate the work that's clearly gone into this, and the opportunity to comment. Some items I considered important during my considerations: the issue of Cross-Species Transmission of diseases, the growing pressures/demands on the area being faced because of the increasing human populations nearby (and the boom/bust cycles that can change everything about a place permanently, often just before that place is then abandoned), air and water quality, attention/priority given to the needs of the Bison, habitat management by species native to the habitat. Thank you for your consideration of my comments.
