Title:

Comments: To Whom It May Concern.

Pack Goats unlike sheep do not clear graze, they prefer to eat a little vegetation here and there and they can survive on the vegetation instead of hay. We keep the goats near us, tied up or on leads so the chances of them coming into contact with other wild animals are close to nil. They are very important to us so that we may access the backcountry as we are handicapped and unable to access these areas without their aid.

Doreen Ogawa
