Title:

Comments: To Whom It May Concern.

The pack goats are not allowed to free graze but are always within our control

They are far less danger to Big Horned Sheep as 95% or more of packgoats are free of mycoplasma ovipneumoniae (M.ovi). <https://www.napga.org/wpcontent/uploads/2019/04/NAPgA-Summary-ofUnderstanding-4.16.19.pdf>

We only take a few Pack Goats out at a time.

Thank you for your consideration.

Chuck Powell
