Comments: I appreciate being able to provide my input and only wish it wouldn't continually fall on deaf ears. Nevertheless, I would like to state our vulnerable and irreplaceable resources deserve much more attention and protection than they currently receive. I urge you to protect our vanishing forests that provide much more than visual aesthetics. No drilling and no more damn!!! The Grand Mesa once housed numerous species that are now threatened or extinct due to a continual lack of planning. I am curious why we never established one large water storage reservoir closer to city limits instead of numerous tiny one's that have wiped out populations of fish due to an unnatural flow, but also to manual draining due to poor planning and lack of overall cooperation. The Draft Environmental Impact Statement should be about protecting the land, water and air.

Thank you.
