Comments: I am writing this to comment on the proposed ban of pack goats as stated in FW-STN

D-Spec-16. I believe pack goats should be in the recreational opportunities, they should not be lumped together with sheep and goats that are used for invasive weed mitigation. There is no scientific proof that goats pass any form of disease to Big Horn Sheep. Furthermore pack goats are trained to stay close to their "human" they are closely bonded and do not wander far away. When in camp they are tethered either on a high line or low line and they are very easy on the environment. I hope you will consider all comments from pack goat enthusiasts when writing the final draft of this plan. Thank you for your time and consideration.
