Comments: I am aware of the benefits selective logging can provide to forests. However, I do not support any logging of old-growth forests. I was distressed to learn that most of the best upland forests meeting, or nearing, operational old-growth definitions are not included in the designated old-growth management prescription. All trees meeting or nearing old-growth definitions need to be protected so that our future generations can feel the awe that comes from seeing these giants of the forests. Thank you!
