Comments: I am in favor of the motorized use of the Sage Hen road with some stipulations. A parking lot should be created west of the corral/parking area with a trail connecting the lot with the road above(to the North of) the single-track entrance. This would allow non motorized users to avoid contact at the entrance to the area. Another option would be to re-rout the single-track trail entrance farther east on the road which is an easier option if there were parking.

I am also opposed to non motorized seasonal closure of the single-track through April. March and April are often the best time of year to enjoy the south facing slopes at Sage.
