Comments: Dear Project Manager Central Tongass LLA,

Dear Troy Heithecker, Acting Tongass Forest Supervisor,

The eco-system is in a very delicate precarious balance right now. Our fish and crab habitats are struggling as evidenced by the fisheries. These forests are an important and integral part of these delicate systems. The Tongass needs to remain protected. Greed will only cost us in the end. We stand to lose our fisheries and our communities, not to mention a jewel of SE AK. Just look at what happened when WA State put money and "progress" ahead of the delicate balance of their eco-system... They have no control fishery now. Keep AK eco-strong! I write to ask you to prioritize protecting and restoring important salmon and wildlife habitat and ending the outdated and damaging practice of large-scale old-growth logging. Fishing and tourism, which rely on healthy fish and wildlife habitat and beautiful scenery, account for 26 percent of jobs in Southeast Alaska and combine to contribute \$2 billion to the regional economy. Fishing, hunting, outdoor recreation, and subsistence resources are all important values to residents and visitors and should take precedence over outdated industrial old-growth logging.

While the timber industry was once an important part of Southeast Alaska, the forest products industry now supports less than 1 percent of local jobs. The Forest Service must keep up with the times. Planning another 150 million board-feet of timber over thousands of acres is simply too much given previous old-growth logging. Young-growth logging should avoid the Tongass 77, including areas within Kadake Creek, Port Camden and Security Bay. On North Kuiu Island, in particular, past failed timber sales demonstrate another old-growth timber sale is unwanted even when propped up with millions of dollars in taxpayer subsidies.

Rather than adding to the sprawling clear cuts and spider web of logging roads, the Forest Service should focus on salmon and deer habitat restoration, repairing places where existing roads impede salmon migration, and promoting recreation and subsistence opportunity.

Thanks,

Sincerely, Janet Wolff
