Comments: I was initially thrilled that a MVUM would be designed for the area. This would aid visitors in understanding of the correct manner in which to enjoy the area. This allows for people to safely travel the area and understand where they are as well as where help or assistance may be. This would also increase the ability for more people to enjoy the area safely. As most people know traversing these roads can be hazardous and regardless of what type of management program things happen.

I strongly disagree with the closure of parts of rim rd 300. This road allows for a scenic ride through our states forest to truly understand its beauty. This proposal would potentially cause A hardship on visitors and enthusiasts in our state and beyond.
