Comments: I have reviewed the Sunnyside Plan of Operations and believe that the Company should be permitted to conduct its proposed drilling campaign at the Sunnyside project in Santa Cruz county. The plan of operations outlines a clear scope of work, along with safety protocols and environmental impacts (water requirements, etc). From my review, the company is taking the proper approach to both explore for economic resources, while still protecting the environment and potential stakeholders -- which is exactly what we as a country should want to encourage.
