Title:

Comments: There should absolutely be no more deforestation!! We do not need to cut down more trees and destroy wildlife habitats. We are ruining the earth at an alarming rate with fracking natural gas, oil pipelines, pumping oil, building so many new business developments, housing developments and what not. We are ruining all of our chances to turn things around and treat the earth with respect before it wipes us off the face of itself. We are ruining the gifts the earth has given us and are disrespecting the natural cycles and balances of eco systems. We need to do everything in our power to keep and develop healthy, balanced eco systems that value nature and humans alike. The land and resources are not for sale and for us to pillage and abuse. It's is not to be used for profiteers. It is for us to live, thrive and survive on and to be able to pass on to the next generation. Please think of the future, think of what we are passing on, think of making it better and doing better for those who come after us!! Please do not open this up to logging!!
