Title:

Comments: The world is dangling on the edge of an abyss. The abyss is run-away global warming. The Tongass National Forest and other forested wilderness areas are carbon sinks of great importance in our effort to avert the worst effects of climate warming. These areas also provide habitat for endangered species, including critically endangered salmon. How short-sighted it would be to sacrifice such important pristine wilderness for a quick buck. Please do not open this land for development. Thank you.
