Title:

Comments: Alternative #6 supports the State of Alaska and its congressional requests to improve access to harvest certain already available limited areas and types of growth.

Alternative #6 includes conservation of roadless values through other means including the Tongass Land Management Plan.

The option Supports the State of Alaska request of the feds and appears reasonable and environmentally protective.

It provides logical use in an area Congress otherwise restricted access and use of; access roads are not currently allowed in some areas, for about 20 years.

I support Alternative #6 as the preferred alternate at this time, as noted in the impact statement prepared under the National Environmental Policy Act.
