Title:

Comments: I strongly oppose opening this forest area to logging and development. The jobs created from logging would be minimal and would only be short term, not permanent. Our planet is in crisis and begging us to listen to the warning signs. We must focus on preserving nature and all forests around us to help us combat climate change. Do not be on the wrong side of history. Do what is right for the citizens, not what benefits industries that do not care what their impact has on everyday people.
