Comments: I think this a horrible idea to begin with and a terrible decision overall. The whole point of the National Parks and Forestry program is to preserve our beautiful land and carve out an oasis for our nature to be preserved. No more logging and development!!! We as a society are switching to an environment friendly paperless alternative and if you dont do the same you are left behind. It is selfish to condemn the creatures who call this land home to death and it is irresponsible to even consider this decision. No amount of money is worth screwing over future generations.
