Title:

Comments: The Tongass forest is one of the remaining American treasures. In a world where capital greed has taken up so much beautiful nature even in my lifetime of 17 years, we must prevent another. Furthermore, the environmental dangers to animals large, like moose, and small, like the northern spotted owl, are drastic. As someone who has fervently debated environmental issues on both sides for my school's debate team, I can tell you that 9/10 times the things we lose (the environment) are superior to what we gain (jobs, etc.).
