Comments: Old-growth forest should not be destroyed or damaged in any way. It is always unsuitable timber region. The provisions in Alternative 6 that allow for logging in old-growth regions of Tongass are unacceptable. Leave Tongass roadless; we cannot afford to destroy the wilderness and habitat that remains. Even a small road fractures wildlife ranges and prevents breeding, movement, and other behaviors essential for functional, healthy populations. There are many reasons to leave Tongass alone, all of which outweigh the possible economic benefits that would result. We can't survive without healthy forests, that's a fact. We can survive with a little less timber. Support sustainable tree farms or more responsible forestry practices instead. But don't destroy our wild.
