Comments: The prairie dog management plan will be beneficial to Thunder Basin National grass land area. The prairie dog has been around for a long time and since then they do have their pros and cons such as they provide food for the predators and they also provide shelter from their vacant holes. But what they are mainly great for is the reduction of high vegetation around the prairie such as tall grass and brush. It also helps the bigger game as food source. They eat healthier from land management from the critters underneath the ground. I do see how it will affect non federal such as grazing and ranching. Mounds making ranchers lose profit such as their cattle and horses are injured and have to be taken down. Prairie dogs are then shot from ranchers frustration. But the more you move them, they will continue to grow, but make sure they are studied and tested if Black footed ferrets are coming back to that area. They need a entire town full of dogs so that way the ferrets wont run out of resource of food. Therefore either alternative will help the Prairie dogs.
