Comments: Choose option 1 - do nothing and maintain the roadless rule.

Old growth forests are a finite resource; once they have been lost, they cannot be regenerated. Please protect this very important and unique ecosystem, one of the last of its kind in our country. Not only do they create important habitats for a wide diversity of species, they are also important carbon reservoirs. At a time when the warming of our planet is rapidly accelerating, we cannot afford to lose such an important protector of biodiversity, nor reduce the population of carbon fixing old growth trees so rapidly.

Do not make the grievous mistake of allowing logging in this protected area.
