Comments: Maps with topographical information included, should be made available, perhaps with co-ordination with Geological Survey, to the public showing all roads regardless if open or closed to vehicle use. Such maps, should have some indication showing which roads are closed to vehicle traffic etc. An example where such maps would be really useful would be if someone is in trouble of one sort or another. With such a map one would know the fastest route out of an area, without such information someone could die. Such maps would also be invaluable for use by search & rescue, by hunters for the legal retrieval of downed game and most valuable to hikers.
