Comments: When will we start looking towards the horizon trying to plan for the long term future instead of looking down at our toes and our immediate wants? With the Kensington Mine having attempted to sweep EPA violations from the view of the locals of Juneau, the mine does not need an extension. If given another 10 years for a total 20 year run of causing irreparable harm any profits made throughout the lifetime of the mine will be nullified by the upkeep and maintenance of the tailing containment dams. If this goes through and when their dam eventually breaks from neglect, the federal government and Dunleavy will have the blood of our culture on their hands. Please stop killing us and our environment.
