I wish to advocate for Alternative 3. It updates the designations of roadless areas in the Tongass National Forest while allowing small-scale harvesting and community and infrastructure development. It preserves the majority of Tongass NF as roadless in contrast with the preferred Alternative 6 (roadless designation eliminated entirely) and seems to be a much better balance.

As a citizen of the United States, I would like to preserve our public lands as close to untouched state as possible for future generations. I prefer not to be in the position of Esau selling his birthright for a pot of beans (Exodus chapter 25 verses 29-34).
