Comments: Re: Tailings and rock storage expansion project.

It only seems reasonable with a viable mining operation that we work proactively to keep this valuable resource and operation active.

I have faith in Kensington's ability to operate prudently as I do with the Forest Service's ability to monitor and work with the operator to keep it environmentally safe.

The future of mining depends upon prudent and environmentally safe operations. They are committed and I trust the system.

Please process the application in favor of the expansion.
