Comments: Dear representatives,

As it is, the oil and drilling companies working on the land that they are on are devastating it and will make it difficult for the wildlife and people to continue living by it. Energy consumption is important, but so is wildlife diversity. I urge you to consider the future repercussions of making this land and other places open to oil and drilling, as opening it up means that the land will be abused and destroyed, preventing future generations of wildlife and people to enjoy what little nature we have left. Please protect this land instead of destroying it.
