Comments: Logging and destroying the forest for jobs is a short term solution to a long term crisis in our economy and this must not happen. the forest needs to remain in tact for carbon sequestration, and because it is a national treasure that can never be rebuilt once it is destroyed. logging must be replaced with other types of renewable fast growing plants like hemp and bamboo and recycling materials we already have. There are solutions to jobs, energy needs and food and housing needs that are still profitable without cutting down more of the earth's natural infrastructure. Please do not go through with the destruction of any part of this national treasure.
