Title:

Comments: Connecting the two areas is the best option for the trail network. Users will have a better over all experience. I hope to see this project move forward ASAP. Members of the community and visitors from the surrounding areas will have a trail system that offers a lower risk of user conflict and those riding bikes will have trail designs that are more suitable for wheels. Feature rich and great multipurpose use trails are heavily desired for modern trail users. More trails closer to home changes everything.
