Comments: The Tongass National Forest is one of the world's great forests. It should be a national treasure, guarded and cherished. Please do not open this forest to roads- which will lead to logging and development. This forest provides us more benefits standing than the lumber ever could. Benefits include carbon sequestration, water purification, air purification, salmon habitat. Our great forests are God's cathedrals. We should treat them with great care and love.

Please do not open the roadless areas to roads and logging.

Thank you for your consideration.
