Comments: To the Honorable Men and Women of our collective Forest Services and administrative bodies,

Please note: In my humble opinion, Our Tongass National Forests should forever remain "Roadless."

In fact, if conventional forest management practices maintain "selective cutting" as a viable Forest Health management Practice, i suggest to you now, removal of dead-wood may be a long term hedge against forest fires and a useful consideration for overall forest health but only with Horse Drawn chain drags and small horse drawn sleds.

I know i am NOT alone in believing recent and uncharacteristic changes in forestry practice in the Tongass National forest are wholly based on non-science. Proposed changes are the rantings of uneducated politicians

No Roads in the Tongass Forests! They belong to the many generations yet to come. These forested lands are NOT yours to squander.
