First name: Igal

Last name: Bucay

Organization:

Title:

Comments: I vehemently oppose building additional roads and increasing the amount of logging in the Tongass National Forest. Considering the impending consequences related to climate change, it is essential that the resources and ecosystems within the Tongass National Forest, as well as the rest of the national parks and forests in the United States, be preserved and conserved. Existing roads in the Tongass National Forest sufficiently fulfill their function -- building additional roads will undoubtedly disrupt numerous ecosystems in the forest.
