Comments: The Tongass stores more carbon removed from the atmosphere than any other national forest in the country in its old-growth Sitka spruce, hemlock and cedar trees. It helps protect Alaska, which is warming more than twice as fast from climate change as our planet overall. The forest holds about 650 million tons of carbon or about half of U.S. carbon dioxide emissions in 2017.

The UN Climate report is "junk" science and is not justification for this irresponsible move.

Leave these ancient trees alone for heaven's sake and do the responsible thing. Stop with all the destruction!
