Comments: To Whom it may concern at the USDA,Again and again, President Trump has denied that humanity can have an impact on global warming. But increasing logging in Tongass National Forest would do exactly that. Even the NFS statement acknowledges the forest's importance in capturing co2.

Rather than allowing roads and relaxing protections, I urge you to instead increase protection for the forest and maintain the ban on roads. Some things we can debate and reverse as administrations change, but if we make a wrong decision about cutting down thousand year old trees, there is no reconsidering in 2020 or 2024 at the latest, when a new administration takes power.

Respectfully,

Rob Kristoff
