First name: Jamie

Last name: Foster

Organization: Mrs.

Title:

Comments: The Tongass stores more carbon removed from the atmosphere than any other national forest in the country in its old-growth Sitka spruce, hemlock and cedar trees. It helps protect Alaska, which is warming more than twice as fast from climate change as our planet overall. The forest holds about 650 million tons of carbon or about half of U.S. carbon dioxide emissions in 2017.

It would be absolutley ridiculous to log this forest. There is no reason - none - that could possibly justify doing it. I am 100% against logging the Tongass.

Your children and grandchildren thank you.
