Comments: Every intact tree and forest is essential to cooling the earth and giving life - ESPECIALLY Tongass National Forest. Any thought to cut these old-growth trees down and build roads into Tongass is reckless, reprehensible, suicidal and totally unjustified as we are battling Global Heating. Nature placed these irreplaceable trees here to cool, sustain and support her intricate web of plant and animal LIFE on which we all depend.

Genuine science verifies if these old trees are destroyed, many which are 1,000-years old, the delicate and vital ecosystems supporting millions of lives will be gone FOREVER. Technology will not replace them. We will have lost the carbon-sink capacity they provide that is so desperately needed right now, tipping the scales irreversibly to fall deeper into a man-made hell on earth.

The Tongass Forest helps protect Alaska, which is heating more than twice as fast from the Climate Crisis as our planet. Alaska and the Arctic are barometers - protecting their forests helps the rest of the US and the earth.

Our National Forests are in the public trust - they are NOT cash crops for a few greedy men to rape and exploit, under the guise of junk science. We must preserve wilderness and leave it untouched. Haven't humans done enough damage to God's earth and climate?

I OPPOSE THIS DEADLY PLAN, AND URGE YOU TO OPPOSE IT. LEAVE THE FORESTS AND THE ANIMALS ALONE TO LIVE && DO THEIR JOBS FOR THE PLANET AND FOR ALL LIFE, which means HUMAN LIFE, TOO.
