Title:

Comments: DO NOT open the Tongass National Forest to logging! This forest stores more carbon than any other forest in our country. Our planet is already experiencing the devastating effects of climate change, and opening this area to logging will only hasten these effects. The administration is using false claims to justify cutting down these thousand-year-old trees, but we all know that this is only about one thing: greed. Our children and grandchildren will curse us for allowing this to happen.
