Last name: MAY

Organization:

Title:

Comments: PROTECTING the remaining (Alaskan) unprotected wilderness areas in the National Forest System is crucial for human future existence on our planet earth.

US National Forests are home to more than 3,000 species of wildlife. Our National Forests provide fresh water, clean air, and places to play, they are critical for the thousands of wild animals & people that live in the USA.

Save US National Forest System from transportation road building, logging & removal of other natural resources for business & industry & Americans will benefit from:

FRESH WATER:Our National Forest watersheds provide fresh water for more than one-third of Americans.

CLEAN AIR:The trees that cover our National Forests sequester carbon, helping to mitigate the effects of climate change.

SCIENCE & KNOWLEDGE RESOURCE:Forest Services Research and Development is the largest forestry research organization in the world.

ADVENTURE, Great and Small:National Forests offer opportunities for Americans to escape and exploration on any scale.
