Title:
Comments: Considering the horrific effects of de-forestation on climate change this proposal does not make rational sense. Scientific facts and evidence provided in 2019 by the government's top scientific experts state that the world's forest are vital to the habitability of earth. Without this protection the future of mankind is doomed. Short term profit over scientific evidence does not make for an investment into saving the planet therefore I respectfully submit my opinion that the Tongass remain roadless and unlogged as a natural safety zone.
